

EXERCISE 1:

I am running java openjdk on version 15

```
javaversion
```

to run the java program in newmath_java first I compile it

```
Javac -encoding UTF-8 --source path src -d dist src/*.java
```

then I run it

```
java -cp ./dist Main
```

here is the output of the running program, below is the screenshot of the terminal

```
javaversion
```

Junit I am working with Junit5 (via vs studio code) to run Junit I need to compile the application and then compile the test code here is the output of the test

```
javaversion
```

EXUnit

Run the tests Mix test

capture after run test

```
captureelixr
```
